### CURRENT CONTENT

(Technical Journals)

(A Monthly Current Awareness Service from Technical Journals)

Vol. 10 No. 04, April, 2026

The Central Library, IBM, Nagpur is subscribing the technical journals and also receiving them on complimentary basis on various subjects like Geology, Mining, Mineral Economics etc. These Technical Journals make up an important collection of latest scientific information. The library is rendering Reference Service to its users from these technical Journals (Article Indexing is one of them). Central Library, IBM provides Current Content Service from these technical journals in the name of "GEM" since 2006 on half yearly basis in print form. To expand this service to the IBM Offices all over India i.e. H.Q., Zonal & Regional Offices and to take a call of time, the Controller General, IBM desired to make this service online on monthly basis. The library staff made efforts to make it successful. This is the 4<sup>th</sup> issue of Volume-10 for this service named "तकनीकी पत्रिका विषय - सूची" (Current Content- A Monthly Current Awareness Service from Technical Journals) Vol. 10 No. 04, April, 2026.

It will be highly appreciated if the valuable feedback is reciprocated. If some article as per content list is found to be of use by the reader the same may be requested and the library will send the scanned copy of the article to the interested reader.

### Against deaths from piped water

Residents of Indore protest following deaths linked to contaminated water. Such tragedies are becoming more common in cities across India.

### Against water bankruptcy

Residents of Lahore pray for rain as the drought gripping Iran enters its sixth year and the world enters an era of water bankruptcy.

Minerals & Metals Review, Vol. 52 No. 3, March 2026

# Minerals & Metals Review

VOLUME NO.52 ISSUE NO.03, MARCH 2026  
Price Rs. 400

RAPSRI has developed a unique permanent mold process (PERMOLD) which has revolutionized design, engineering and quality standards of conventional casting processes and fabrications.

PERMOLD has the following inherent advantages over the conventional castings processes for shaped castings:

- Superior mechanical properties and microstructure
- Excellent electrical conductivity (95% 101% IACS)
- Higher density
- Very close as-cast tolerances ( $\pm 0.25\text{mm}$ )
- Near-net shaped products (eliminating secondary machining/finishing operations)
- Higher casting yields

PERMOLD process has proven applications world over:

**Brazed Joints:**  
Poor Electrical Conductivity across the joint  
Weight: 5.5 Kilograms

**Copper Casting:**  
Over 100% improvement  
Excellent Uniform Conductivity  
Weight: 4.9 Kilograms

**Copper Bonded Fabrication:**  
Highly stressed bonded joint  
Poor Electrical Conductivity across the joint due to Residual Stress  
Requires stress relieving heat treatment for restoring properties

**Copper Casting:**  
Casted as one piece component  
Excellent Uniform Conductivity  
No such treatment required

- Various copper/copper alloy fabrication made from extrusions, forgings etc. by bending and twisting operations can be converted to PERMOLD castings and thereby eliminating secondary processes like stress relieving etc. to restore properties particularly to restore conductivity across the junctions.
- Assemblies involving multipart sheaf/taffles steel fabrications requiring riveting, welding and gearing converted to PERMOLD aluminum bronze and/or specialty brass castings to reduce part numbers, improved strength, improved corrosion resistance and increase productivity.

**PERMOLD Alloys:**

- Coppers (85%, 95%, 99% & 101% IACS)
- Low alloy coppers (high strength & high conductivity)
- Aluminum Bronzes
- Specialty brasses
- Specialty tin bronzes

**RAPSRI ENGINEERING PRODUCTS COMPANY LIMITED**
